3. DataManager

3.1 Plain Old Java Object (POJO)

3.2 Conversion between POJO and Document

```
private static Document buildCreatorDocument(ICreator creator) {
    return new Document("userId", creator.getUserId() )
        .append("userName", creator.getUserName())
        .append("email", creator.getEmail())
        .append("isMailPublic", creator.getIsMailPublic())
        .append("pictureURL", creator.getPictureURL());
}

public static ICreator buildCreator(Document creatorDoc) {
    ICreator creator = new Creator();
    creator.setUserId(creatorDoc.getString("userId"));
    creator.setUserName(creatorDoc.getString("userName"));
    creator.setEmail(creatorDoc.getString("email"));
    creator.setIsMailPublic(creatorDoc.getBoolean("isMailPublic"));
    creator.setPictureURL(creatorDoc.getString("pictureUrl"));
    return creator;
}
```

3.3 Sub-document „creator“

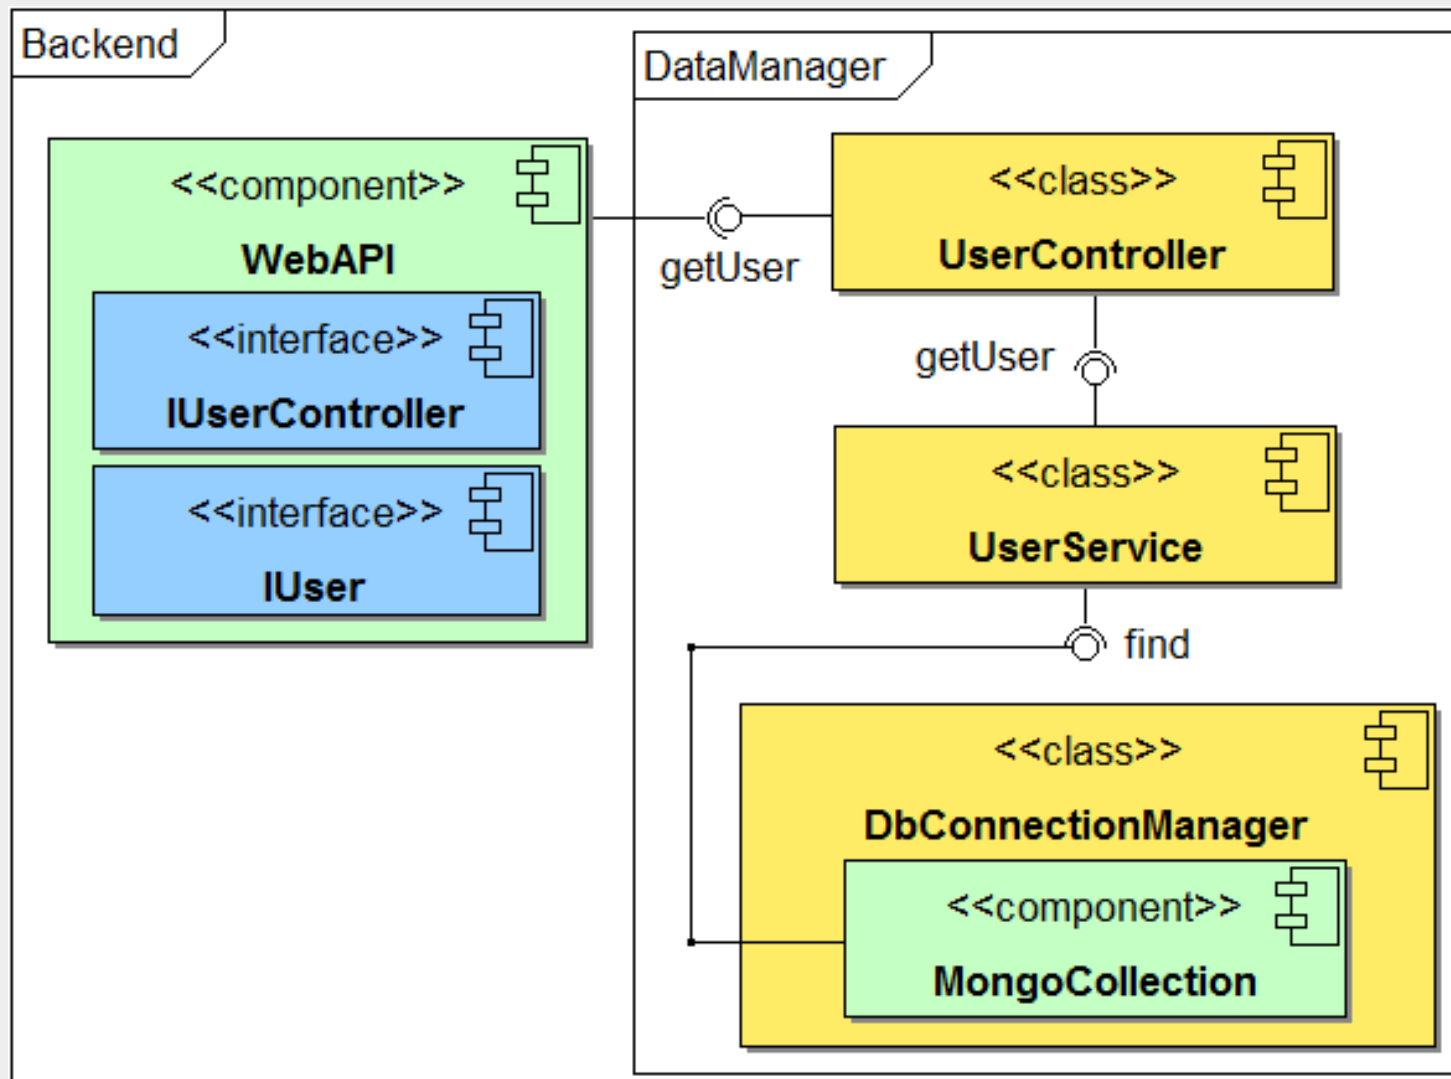

```
...  
"catagory" : "OTHER",  
"creator" : {  
  "userId" : "583ac70f6bd8bf1b885592f8",  
  "userName" : "user31",  
  "email" : "test31@tester.de",  
  "isMailPublic" : true,  
  "pictureURL" : null  
},
