

Ideas - Web Application – Part 1

Berufsakademie Sachsen
Staatliche Studienakademie Leipzig
Module: System Implementation
Lecturer: Prof. Dr.-Ing. Christian Heller
Seminar Group: CS14
16.12.2016

A presentation by:

Stefan Lerm
Florian Aurich
André Noldin

Outline

- 1 Introduction
- 2 Ranking-Algorithm
- 3 Architecture
- 4 User Features
- 5 Localisation

2. Ranking-Algorithm

Hot-ratings:

- likes: 50%
- followers: 30%
- age: 20%

Trending-ratings:

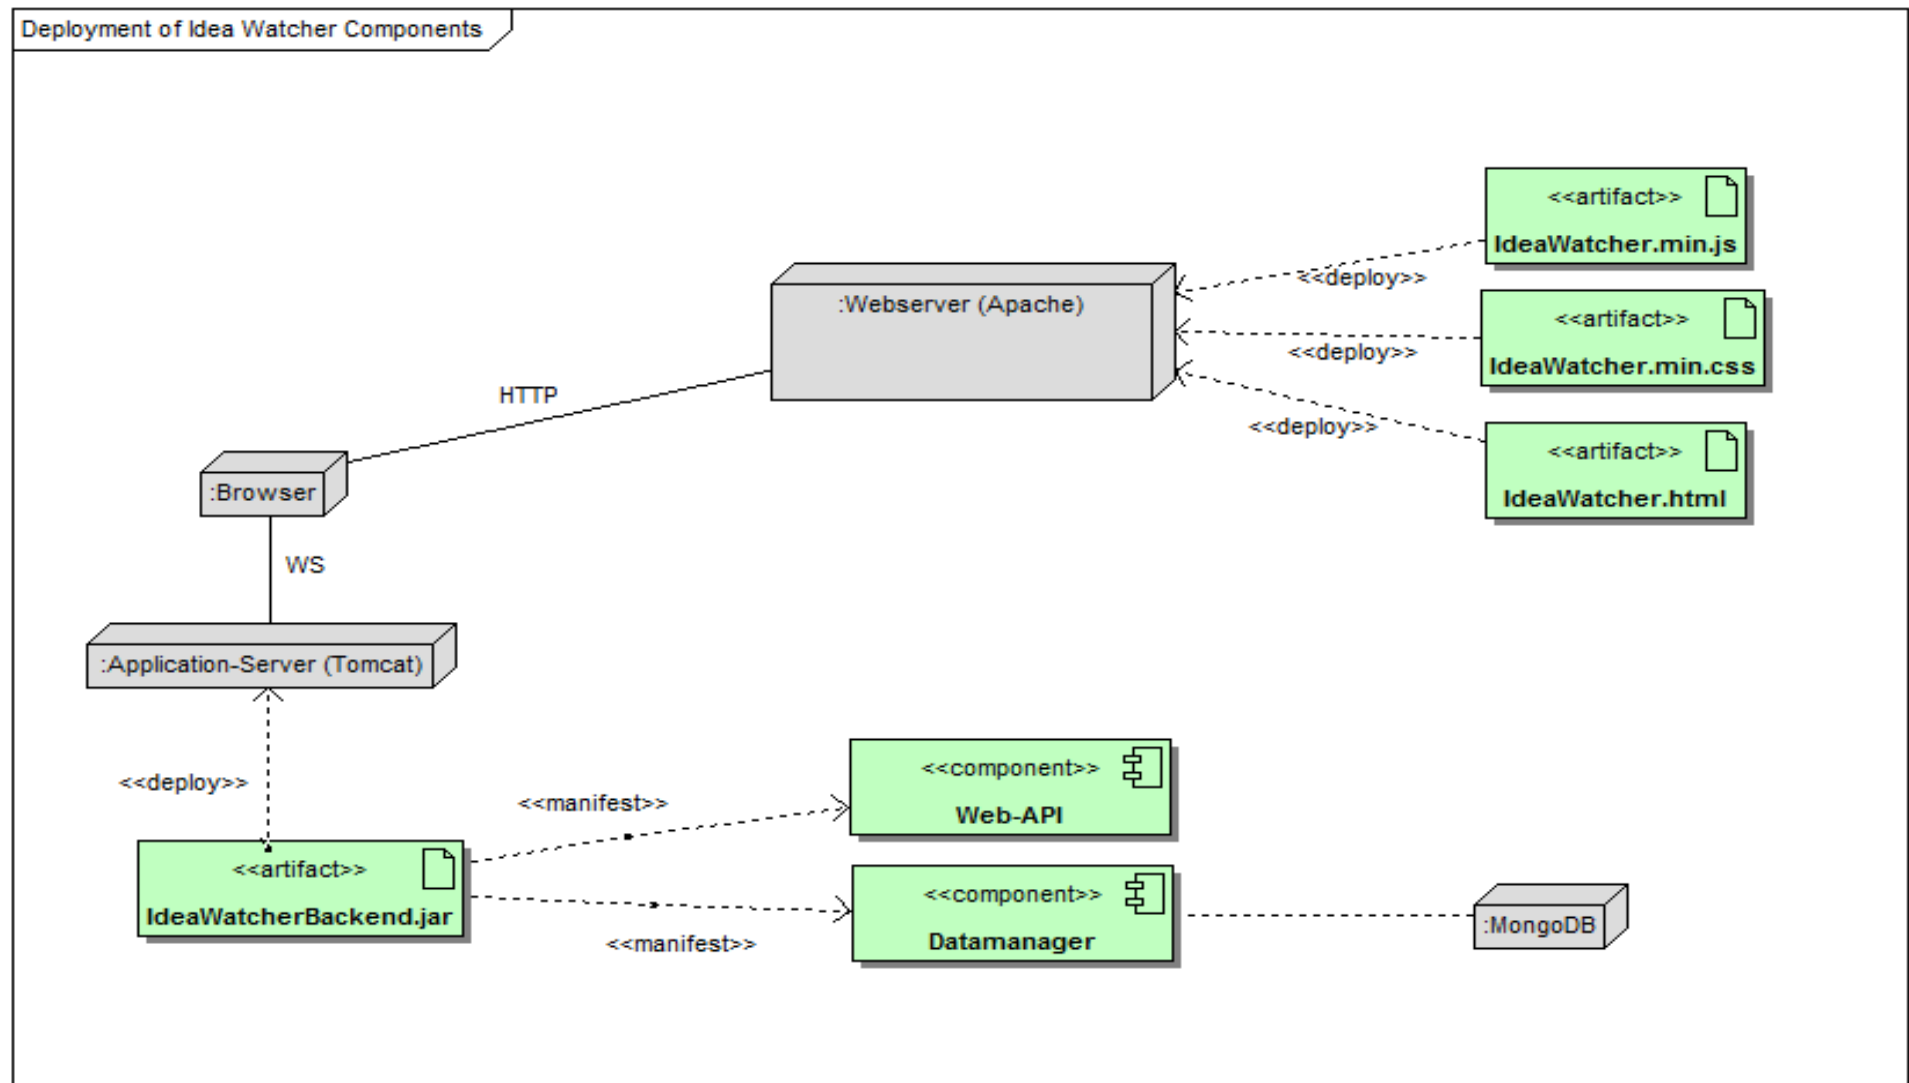

- likes: 30%
- followers: 10%
- age: 60%

Fresh-ratings:

- likes: 0%
- followers: 0%
- age: 100%

3. Architecture

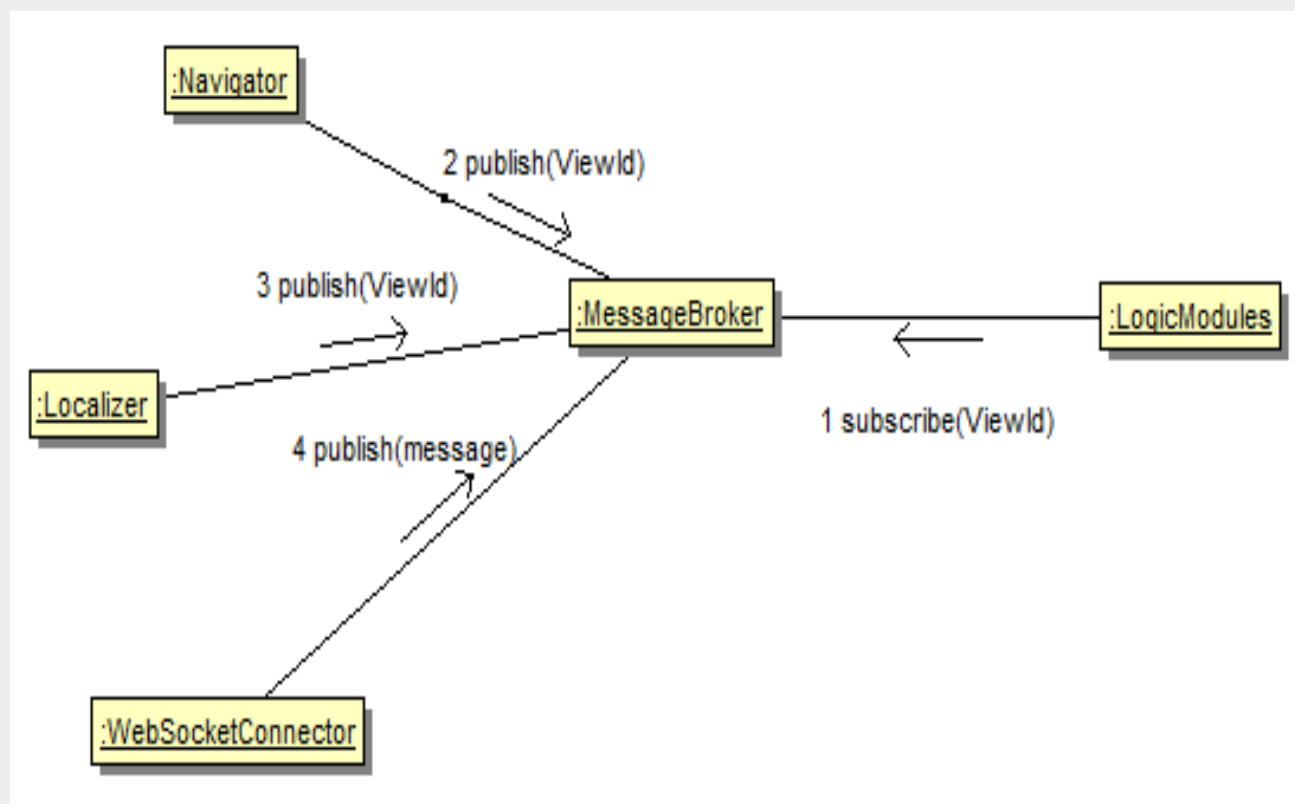

3.1 MessageBroker

Publish / Subscribe Pattern

- Promote Loose coupling
- Backend communication

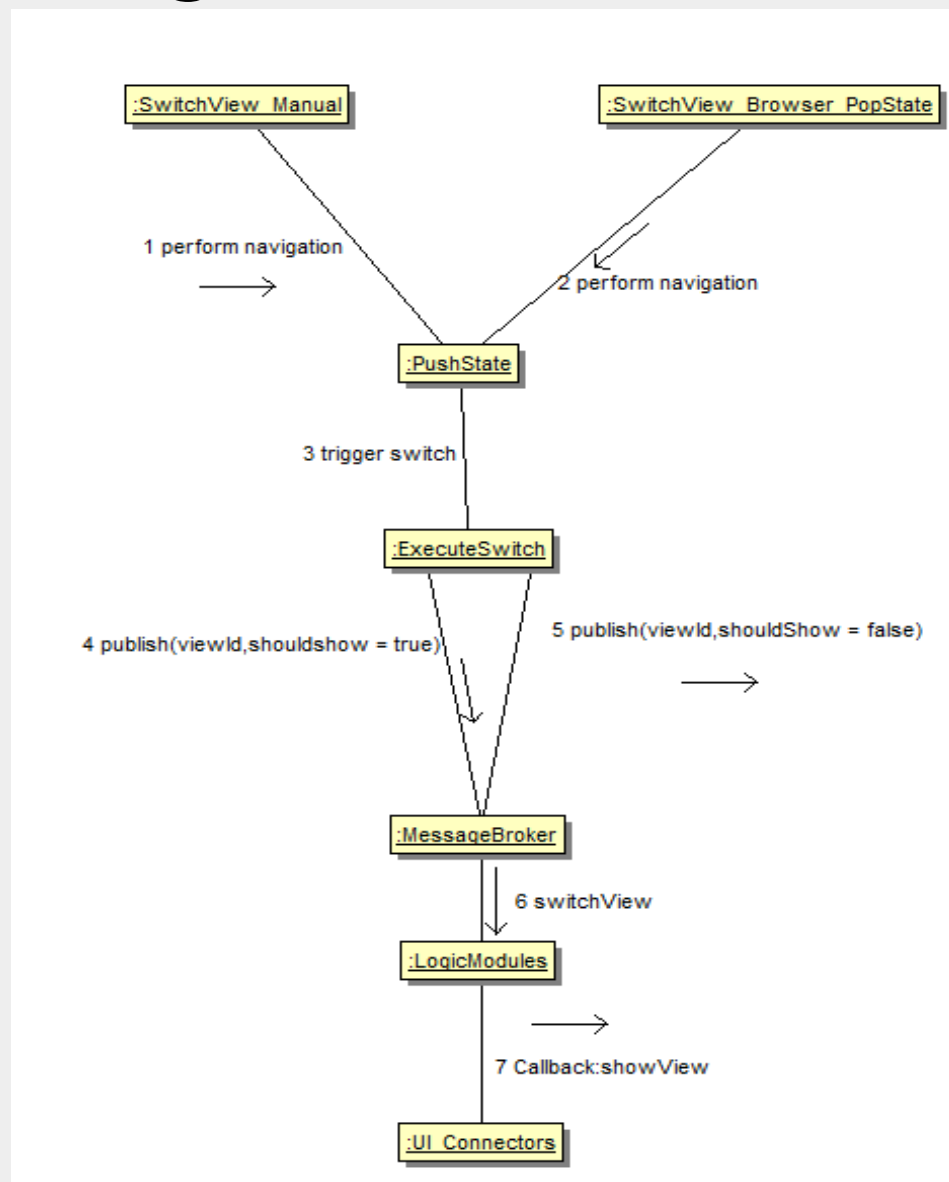

3.2 Navigator

HTML5 History API

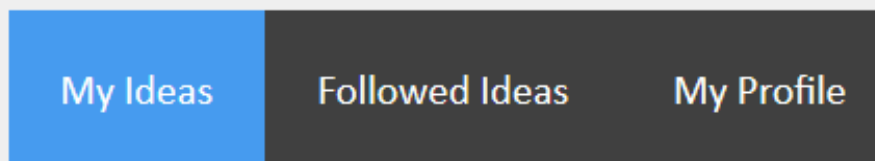

- Native Navigation
- Complete URL support
- Bookmarking in SPA
- Utilizes MessageBroker
- CSS: display:none;

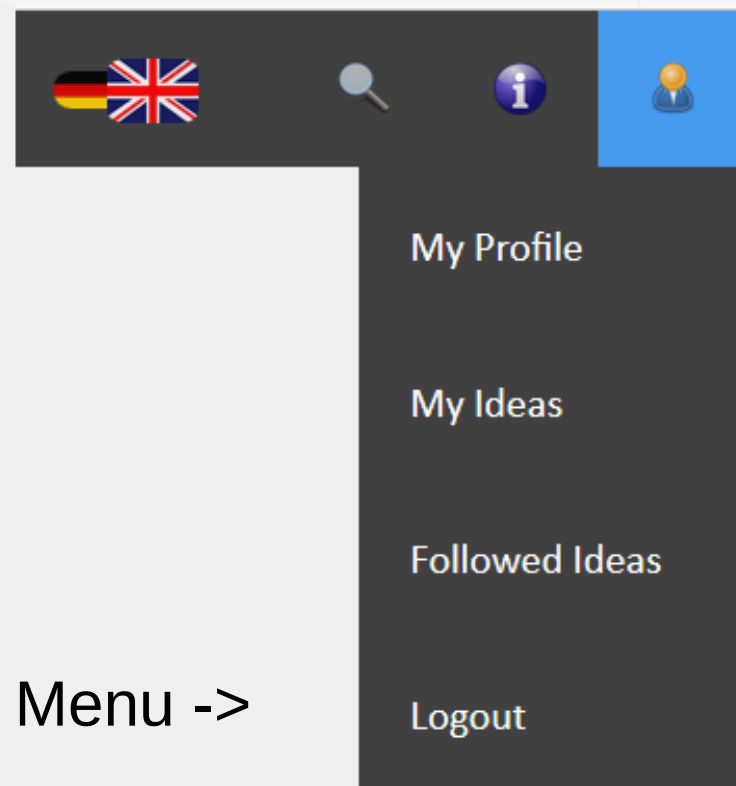

4. User Features

User Sub-Sidebar

Dropdown Menu ->

5. Localisation

German

to

English

Quelle: <http://www.englisch-hilfen.de/images/flags/230.gif>

5. Localisation

localizer.js

```
ideaWatcher.core.Localizer.About = ideaWatcher.core.Localizer.About || {  
  
  en_GB: {  
    header: "About"  
  },  
  de_DE: {  
    header: "Impressum"  
  }  
};
```

ui-Connector

```
function localizeView() {  
  
  var language = ideaWatcher.core.Localizer.getLanguage();  
  
  console.log("Starte Lokalisierung der About-View ...");  
  
  htmlHeader.textContent =  
    ideaWatcher.core.Localizer.About[language].header;  
  
}
```

End of part 1...

Appendix: Ranking-Algorithm

Pedal battery charger

If your battery is low, e.g. in your smartphone or your notebook, and you are far away from a power socket, then this gadget will charge your battery by your own muscle power. Just move the pedal and your force will be converted into electric energy which is usable for all kind of small devices. You can simply move it with your foot while you are sitting or with your hand while walking around.

Published: 04/12/2016 10:12:40

max likes = 14

$$5 / 14 = 0.357$$

≈ 1036800 seconds

max followers = 5

$$2 / 5 = 0.4$$

max age = 1814400

$$(1814400 - 1036800) / 1814400 = 0.429$$

Hot-ratings:

likes = 0.5

$$0.5 * 0.357$$

followers = 0.3

$$+ 0.3 * 0.4$$

age = 0.2

$$+ 0.2 * 0.429$$

$$\Rightarrow \text{hot-rank} = 0,3843$$
